

Foresight Signs an Agreement with Chinese CarManufacturer JAC for a Pilot Test

JAC is one of China's largest manufacturers, with production capacity of hundreds of thousands of vehicles per year

NESS ZIONA, April 26 - **Foresight, a leading developer of advanced systems for road traffic accident prevention (TASE: FRST)**, announced today the signing of an agreement with leading Chinese car manufacturer JAC, for a pilot project to test Foresight's system.

JAC will provide Foresight with a pool of vehicles, to be equipped with the company's accident prevention system and test its performance. The pilot test will be financed by the manufacturer, except for production, shipping, installation and de-installation costs. The objectives of the test are to demonstrate the performance of Foresight's accident prevention system, which is based on 3D technology, and to gain profound understanding of the Chinese driver's requirements of driver assistance systems, based on local weather, infrastructure and common driving conduct.

The parties will consider a commercial agreement based on the results of the pilot test.

JAC is one of the largest vehicle manufacturers in the Chinese market, with the capacity to manufacture hundreds of thousands of cars every year. It is one of very few Chinese manufacturers to offer various types of vehicles: private cars, vans, buses and electric cars. The company employs over 35,000 people and, in addition to manufacturing vehicles, also manufactures parts for the automotive industry.

Foresight's accident prevention system comprises twin cameras, mounted on the front of the car, which are designed to provide stereoscopic (3D) vision. The images are then analyzed by sophisticated computer software using advanced algorithms, to identify obstacles on the road and warn drivers, to reduce the potential for accidents.

The current version can warn drivers if they follow another vehicle too closely, alert drivers to other moving or stationary vehicles, and detect cyclists, pedestrians, and other hazards in the vehicle's path. The sensors can alert a driver to oncoming objects as small as 40cm X 40cm. Drivers can activate the sensors as needed and customize them to meet specific needs.

ABOUT FORESIGHT

Foresight (FRST: TASE), founded in 2015 is a technology company engaged in the design, development and commercialization of 3D multi-camera-based Advanced Driver Assistance Systems ("ADAS"). The Company, through its subsidiary, develops advanced systems for accident prevention, which are designed to provide real-time information about the vehicle's surroundings while in motion. These systems, which are based on 3D technology, advanced algorithms and artificial intelligence, will revolutionize ADAS by providing an automotive grade, cost-effective platform, enabling highly accurate and reliable detection while ensuring the lowest rates of false alerts.

Forward Looking Statements

This press release contains forward-looking statements. Words such as "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates" and similar expressions or variations of such words are intended to identify forward-looking statements. These statements are only predictions based on Foresight's current expectations and projections about future events.

There are important factors that could cause Foresight's actual results, level of activity,

performance or achievements to differ materially from the results, level of activity, performance or achievements expressed or implied by the forward-looking statements.

Those factors include, but are not limited to the impact of general economic conditions, competitive products, product development risk, product demand and market acceptance risks, reliance on key strategic alliances or fluctuations in operating results. Except as otherwise required by law, Foresight undertakes no obligation to publicly release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.
